

Fleetdown Curriculum Statement

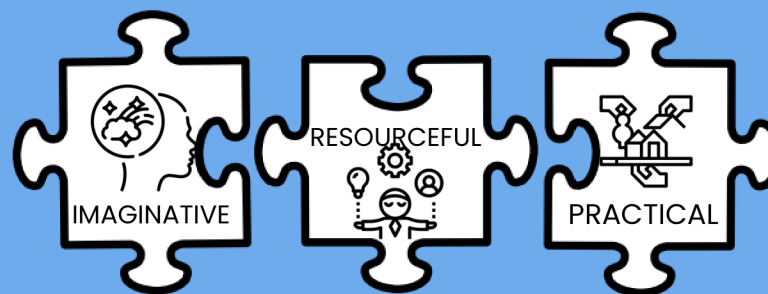

DESIGN AND TECHNOLOGY

Purpose

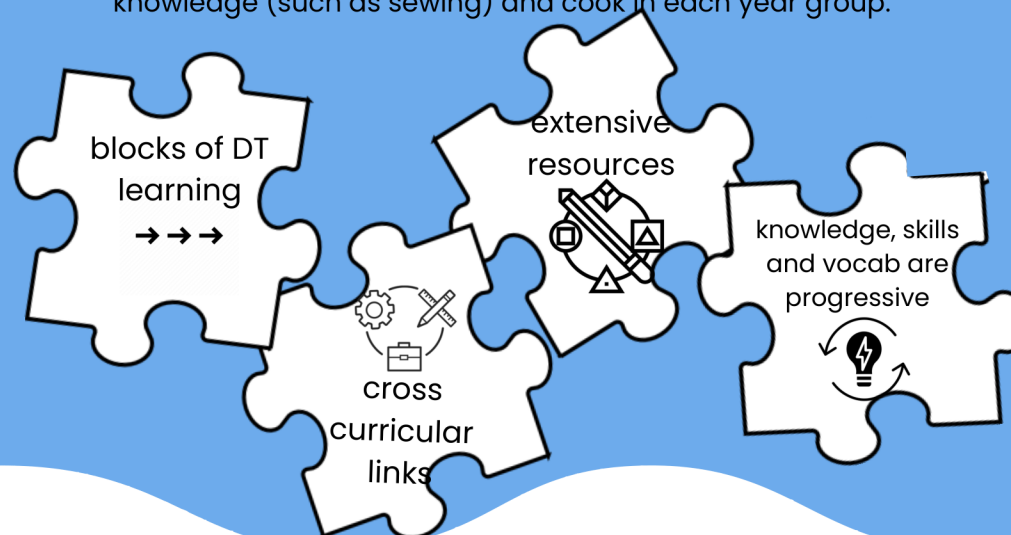

Design and technology at Fleetdown aims to allow children to design, make and evaluate their own products from start to finish. The curriculum intends to teach resilience and innovation; allowing children to be resourceful and collaborate in their learning.

Implementation

At Fleetdown, our design and technology curriculum is delivered through the vehicle of a termly topic. This topic is used to deliver a curriculum which develops skills, knowledge and vocabulary progressively over time. Termly learning is outlined for children in their sticky knowledge documents.

Every child learns to design, make and evaluate. They learn technical knowledge (such as sewing) and cook in each year group.

Impact

Our children can discuss their experiences in design and technology confidently; expressing any tasks they have undertaken and problems they have overcome. They all have a basic knowledge of food hygiene and food preparation.

Design and technology is monitored in line with our assessment policy.
